Unable to Install Some OI Servers on Core G-3.0

ANSWER

Example installation error: ***This setup requires Wonderware Operations Integration - Core (G-1 Series).***

Workaround:

1. Deactivate all OI Servers
2. Navigate to C:\Program Files (x86)\ArchestrA\OIServerRuntimeComponents\Bin\
3. Rename or make a backup copy of the existing DASWrapper.dll that OI Core G-3.0 installed
4. Place an older DASWrapper.dll in this location (any version from an OI Core that is equal or greater than the OI Server G-version, up to Core G-2.2 will work)
5. Install the OI Server
6. Restore the proper DASWrapper.dll

A defect Change Request has been reported to development for this issue. (L00153399)
